

Here's a list of different types of nurses based on their specialties and roles:

1. **Registered Nurse (RN)** - Provides patient care, educates patients, and supports doctors in various healthcare settings.
2. **Licensed Practical Nurse (LPN) / Licensed Vocational Nurse (LVN)** - Provides basic nursing care under the supervision of an RN or physician.
3. **Nurse Practitioner (NP)** - An advanced practice registered nurse who can diagnose and treat medical conditions, often specializing in areas like pediatrics, family medicine, or gerontology.
4. **Clinical Nurse Specialist (CNS)** - An expert in a specific area of nursing practice, providing specialized care and consultation.
5. **Nurse Anesthetist (CRNA)** - Specializes in administering anesthesia and providing anesthesia care during surgical procedures.
6. **Nurse Midwife (CNM)** - Focuses on women's reproductive health, including pregnancy, childbirth, and postpartum care.
7. **Pediatric Nurse** - Specializes in caring for infants, children, and adolescents.
8. **Geriatric Nurse** - Focuses on the care of older adults and the unique health issues they face.
9. **Critical Care Nurse** - Provides care for patients with life-threatening conditions, typically in intensive care units (ICUs).
10. **Emergency Room Nurse** - Works in emergency departments, providing immediate care to patients in urgent situations.
11. **Oncology Nurse** - Specializes in caring for cancer patients and administering cancer treatments.
12. **Cardiac Nurse** - Focuses on patients with heart conditions, providing care in settings such as cardiology units or intensive care.
13. **Dialysis Nurse** - Provides care for patients undergoing dialysis treatment for kidney failure.
14. **Home Health Nurse** - Delivers nursing care in patients' homes, often for chronic conditions or post-operative care.
15. **Occupational Health Nurse** - Focuses on the health and safety of workers, including injury prevention and health education in the workplace.
16. **Public Health Nurse** - Works to improve community health through education, prevention, and health promotion initiatives.
17. **Nurse Educator** - Teaches and trains nursing students or practicing nurses in academic or clinical settings.

18. **Research Nurse** - Works on clinical trials and research studies, assisting with data collection and patient care related to research protocols.

19. **Transplant Nurse** - Specializes in the care of patients undergoing organ transplants.

20. **Infection Control Nurse** - Focuses on preventing and controlling infections in healthcare settings.

This list highlights the diverse roles and specialties within the nursing profession, each playing a crucial part in patient care and healthcare delivery.
